Nasal Spray

Olympia Pharma is comprised of a state-of-the-art FDA 503B pharmaceutical outsourcing facility, and a 503A pharmacy. Both facilities provide access to high quality age management and nutritional medications.

## OVERVIEW

*Vitocin* ("oxytocin"): a real "love drug", Oxytocin is a hormone produced mainly by the hypothalamus and released directly into the blood via the pituitary gland. Best known for it's role in child birth, Oxytocin plays a vital role in triggering uterine contractions. Recent research has shown that Oxytocin may have many other far-reaching effects particularly when it comes to relationships and emotional involvement.

Sometimes called the "the cuddle hormone", Oxytocin is released in response to a variety of environmental stimuli including skin-to-skin contact and cervical stimulation experienced during sex. It promotes a bond of intimacy, closeness, and desire which increases sexual receptiveness. So, given it's ability to generate emotional connection and sexual intimacy, Vitocin really is the nearest thing to a "love drug."
